

# Organically Grown Canadian Seed Potatoes

- A. Potato Colomba
- B. Potato Caroline
- C. Potato Gold Rush

ORGANICALLY  
GROWN

## Potato Planting Instructions

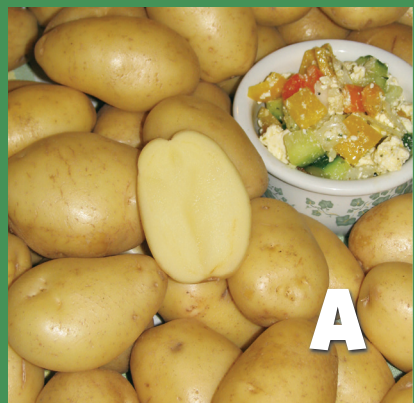

**Where:** Grow potatoes in a full sun area in well-drained, sandy soil. Avoid planting potatoes in the same spot every year.

**When:** 3-4 weeks before planting, place potatoes in a bright frost-free area to sprout.

**How:** Plant spouted potatoes in rows 12 cm (6") deep and 30 cm (12") apart, rows should be 60 cm (24") apart.

**Summer Care:** In mid-July hill the potatoes to protect the growing tubers from greening.

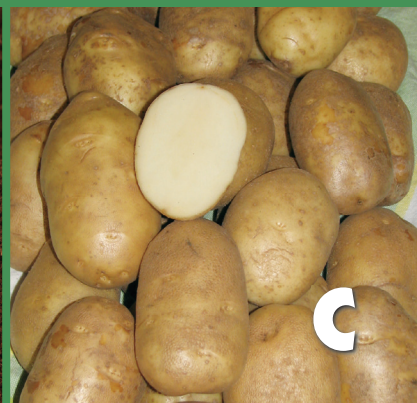

**Harvest:** When the tubers have reached a usable size or the tops have died down. Mature potatoes should be left in the ground for 1-2 weeks allowing the skins to properly set which will increase their storage ability.
