

Stylish Summer Calla Collection

- A. Calla (Zantedeschia) White
- B. Calla (Zantedeschia) Pink
- C. Calla (Zantedeschia) Yellow
- D. Calla (Zantedeschia) Black

Planting Instructions

Where.

1. Choose a location that receives full to part sun.

When:

2. For early flowering start your bulbs in pots Mid-Late April. Start your tubers in 10-15 cm (4-6") pots in a planter box medium. Keep pots moist, warm and frost free.
3. You can also plant your bulbs directly in the ground, when the soil outside is at least 10 °C (50 ° F).

How:

4. Dig a hole at least 15 cm (6" deep) and 15 cm (6") wide.
5. Place the bulbs or started plants 10 cm (4") deep and 30 cm (12") apart. Fill in the hole and thoroughly water.

After Care:

6. Continue to water and disbud any faded blooms throughout the summer season. Fertilize throughout the summer.
7. Callas are not winter hardy. After the first major frost in the fall lift the bulbs. Remove growing stems and the soil around the bulbs.
8. Store the bulbs over winter in frost free boxes with dry peat until spring.

**Store in a Cool, Dry Place
Until Planting!**
